

Kethic

AI-native web language that cuts generated source by 90%+

PROBLEM

AI builders still output expensive web code

The user asks for a page. The model pays to write thousands of tokens of HTML, CSS, JS, or React.

Cost

Output tokens are the expensive part of generated software.

Latency

Verbose source slows generation and repair loops.

Fragility

More generated code gives the model more surface to break.

SOLUTION

Kethic compresses intent before it becomes web code

AI writes compact Kethic. The compiler expands it into accessible HTML, responsive CSS, and runtime JavaScript.

A working compiler turns short Kethic into real websites

The prototype already supports pages, components, responsive layouts, forms, state, events, and interactions.

```
st joins = 0
act join
  set joins = joins plus 1
end
pg Landing
  hero "Kethic" "AI-native sites"
  signup name email submit:"Join"
end
```

Kethic landing page

Hero, signup form, responsive layout

BENCHMARK

Same website. Same model. 96%+ smaller generated source.

Kethic compiled successfully on the first valid benchmark run.

96.21%

Output tokens

lower than React/Tailwind

96.35%

Source size

smaller than React/Tailwind

91.60%

Total tokens

lower total prompt + output

React/Tailwind: 5,224 completion tokens, 21,449 source characters

Kethic: 198 completion tokens, 782 source characters

Kethic

MARKET

Kethic starts with AI web generation, then expands into AI coding

We begin where token waste is easiest to prove: generated websites and app frontends.

\$8.5B

TAM

global AI code assistants
market in 2025

\$1.2B

SAM

AI web builders, no-code
tools, generated frontend
workflows

\$12M

SOM

first 24-month wedge from
hosted builder and tooling

COMPETITION

Most tools improve prompting. Kethic changes the generated language.

AI builders

Great UX, but verbose platform code underneath.

React/Tailwind

Powerful, but expensive for models to generate repeatedly.

Kethic

Compact source plus compiler-enforced web output.

Open source the language. Monetize the hosted builder.

0-3 months

Publish compiler, AI guide, benchmark page, and 10 demo templates.

3-6 months

Reach 1,000 developers/founders through AI builder communities and open-source demos.

6-12 months

Convert hosted users at \$19-\$49/month and pursue 3 platform integrations.

TEAM

Founder building from compiler to product

Micheal Ijaola

Founder and CEO

Micheal Ijaola

Founder and CEO. Built the compiler prototype, native web layer, benchmark harness, and investor demo.

Current need

Pre-seed capital to bring in design, compiler, and GTM support around the working prototype.

Next hire focus: design, compiler engineering, and GTM support.

THE ASK

We are raising \$50k pre-seed

Funds go directly into finishing the language and launching the public builder.

Language

Finish data, backend, and app primitives.

Proof

Public benchmark demos and side-by-side output comparisons.

Launch

Hosted Kethic builder and early user onboarding.

BUILD MORE WITH FEWER GENERATED TOKENS
